

CLINICAL DEFECT & ADVERSE QUALITY REPORT

Confidential - Pharmaceutical Quality Assurance Module

Complaint Source:	Healthcare System / Critical Care Unit
Customer Name:	Apollo Multi-Specialty Hospital, Oncology & ICU Wing
Product Name:	Heparin Sodium Injection 5000 IU/mL
Product Grade:	USP Sterile Injectable Solution (FDF)
Batch/Lot Number:	HEP-2024-551
Manufacturing Date:	2024-03-01
Expiry Date:	2026-02-28
Quantity Affected:	12 Vials (10 mL clear glass vials)
Complaint Date:	2024-06-22
Complaint Type:	Foreign Particulate Matter / Contamination
Severity Assessment:	CRITICAL (Class I Recall Risk)
Priority:	URGENT

Detailed Incident Narrative:

During pre-administration visual inspection in the Cardiac ICU, the attending nurse observed visible dark sub-visible particles suspended in 3 sealed 10 mL vials of Heparin Sodium Injection (Batch HEP-2024-551). A second nurse inspected the remaining carton and found 9 additional vials containing black particulate shavings adhering to the meniscus and rubber stopper interface. The vials were immediately isolated prior to patient cannulation. Physical examination suggests chlorobutyl rubber stopper coring or degradation. Immediate sterile manufacturing line audit and mandatory FDA Field Alert Report notification are strongly recommended.
